

(a) Simulation vs. Hardware Mismatch Severity

(b) Per-Scene Hardware Residual Ratios

(c) Simulation-to-Hardware Gap Summary

	Simulation	Hardware	Gap?
CASSI (spectral)	3.38 dB drop	1.8x ratio	LARGE gap
CACTI (temporal)	10.94 dB drop	10.4x ratio	No gap

CASSI: Real mask has pre-existing manufacturing errors that absorb additional perturbations.

CACTI: Simpler temporal mask has fewer errors → perturbation propagates at full strength across all frames.
