

a**Natural-language prompt**

"Design a CT scanner
for clinical brain imaging"

sole user input

PWM
Agent

spec.md (excerpt)

```
modality: ct
carrier: x-ray
primitives:
  - Project (Radon, 180 angles)
  - Convolve (detector blur)
  - Poisson (1e5 photons)
solver: FBP + TV ( $\lambda=0.02$ )
gate_1: rank(A)/N = 0.89
gate_2: SNR = 42.1 dB
gate_3:  $\Delta\text{CoR} < 0.5$  px
```

b**Triad Gate Certificate****Gate 1: Recoverability****PASS**

rank(A)/N = 0.89 > 0.5
Information capacity
sufficient for reconstruction

Gate 2: Carrier Budget**PASS**

SNR = 42.1 dB > 20 dB
Photon flux adequate
for target resolution

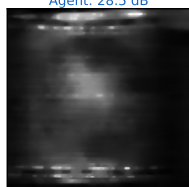

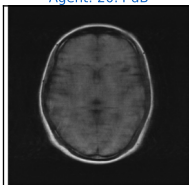

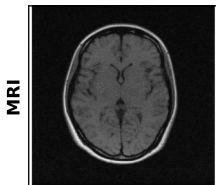

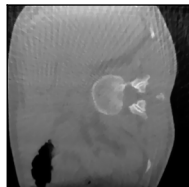

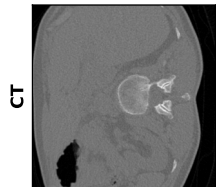

Gate 3: Op. Mismatch**PASS**

$\Delta\text{CoR} = 0.3$ px < 0.5 px
Calibration within
tolerance bounds

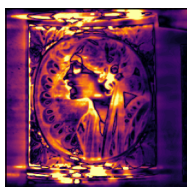

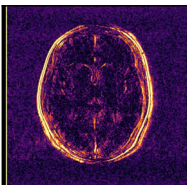

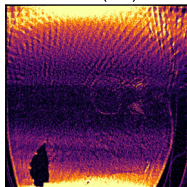

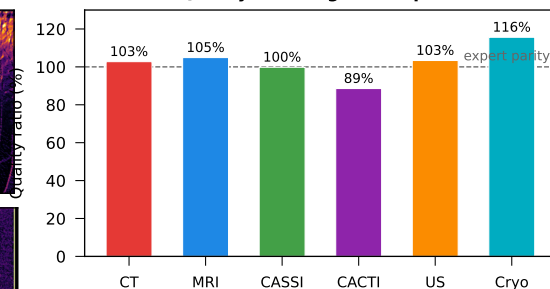

c

Ground truth

Reconstruction

**d**

Error (x5)

**Quality ratio (agent / expert)****Theorem 1 tightness ratio**
